

Requirement Analysis – 2. Dataflows and User Stories

Incident Lifecycle Automation using ServiceNow

Data Flow

Step	Data / Record Movement
1. Incident Creation	Caller details + issue description → Incident record
2. Classification	Category + Subcategory + Urgency + Service + CI → Classified Incident
3. Assignment	Classified Incident → Service Desk / appropriate support group
4. Investigation	Incident → Knowledge Articles + SLA information + Work Notes
5. Escalation / Change	Incident → Level 2 Support / Emergency Change / Child Incident when required
6. Resolution	Cause + Resolution Code + Resolution Notes → Resolved Incident
7. Knowledge Creation	Resolved Incident → Knowledge Article
8. Tracking	Incident + Change + Child Incident + Knowledge + SLA → Related Records / lifecycle visibility

User Stories

ID	User Story
US-01	As a Service Desk agent, I want to create and classify an incident so that it can be routed to the appropriate support team.
US-02	As a Service Desk agent, I want relevant knowledge articles to appear for an incident so that I can use available guidance during resolution.
US-03	As a support agent, I want to reassign an incident to the correct support group so that the appropriate team can investigate it.
US-04	As a Level 2 technician, I want to review incident details, knowledge and SLA information so that I can investigate the issue effectively.
US-05	As a support technician, I want to create or link an emergency change when required so that the necessary service change is tracked with the incident.
US-06	As a support agent, I want to create child incidents for related issues so that recurring or related work can be tracked.
US-07	As a technician, I want to record probable cause and resolution details so that the incident has a clear resolution history.
US-08	As a support team, I want to create a Knowledge Article from a resolved incident so that useful resolution information can be reused.
US-09	As a service manager, I want SLA and related records to be visible so that incident progress and compliance can be monitored.
