

Requirement Analysis – 3. Solution Requirements

Incident Lifecycle Automation using ServiceNow

Functional Requirements

ID	Requirement
FR-01	The system shall allow Service Desk agents to create incident records.
FR-02	The system shall support incident classification using Category, Subcategory, Urgency, Service and Configuration Item.
FR-03	The system shall support assignment and reassignment of incidents to appropriate support groups.
FR-04	The system shall provide relevant Knowledge Articles through Agent Assist.
FR-05	The system shall support escalation to Level 2 support teams.
FR-06	The system shall support creation of emergency change requests from incidents when required.
FR-07	The system shall support creation and tracking of child incidents for related issues.
FR-08	The system shall allow probable cause, resolution code and resolution notes to be recorded.
FR-09	The system shall support creating a Knowledge Article from a resolved incident.
FR-10	The system shall provide SLA and related-record tracking for the incident lifecycle.

Non-Functional Requirements

Area	Requirement
NFR-01 – Usability	The solution should provide a clear and consistent interface for incident creation, classification and resolution.
NFR-02 – Performance	Incident records, related information and knowledge results should be available within an acceptable response time during normal use.
NFR-03 – Availability	The solution should support reliable access to incident-management functions during operational use.
NFR-04 – Security	Access to incident information and actions should be controlled according to user roles and permissions.
NFR-05 – Maintainability	The configuration should be structured so that workflows, rules and supporting components can be maintained and updated.
NFR-06 – Traceability	Incident activities, work notes, related changes, child incidents, knowledge and SLA information should remain traceable.
