

1. Brainstorm and Ideation Template

Incident Lifecycle Automation using ServiceNow

Step 1: Team Gathering, Collaboration and Select the Problem Statement

The team discussed common IT incident-management challenges and collaborated to identify a problem suitable for a ServiceNow-based solution.

Selected Problem Statement:

IT organizations face difficulties in efficiently managing incidents from reporting to resolution due to manual processes, delayed assignments, poor tracking, and lack of coordination between support teams.

Step 2: Brainstorm, Idea Listing and Grouping

Brainstormed Idea	Group
Automated Incident Management	IT Service Management
Automated Incident Assignment	Automation
Knowledge Article Integration	Knowledge Management
Incident Escalation	Support Management
Emergency Change Creation	Change Management
Child Incident Management	Incident Management
SLA Tracking	Service Monitoring

Step 3: Idea Prioritization

Ideas were prioritized based on problem relevance, automation potential, implementation feasibility, IT support value, and scope for ServiceNow features.

Selected Idea: Incident Lifecycle Automation using ServiceNow

The selected idea focuses on incident creation, classification, assignment, escalation, resolution, knowledge creation and SLA tracking.
