

2. Define Problem Statement

Incident Lifecycle Automation using ServiceNow

Customer Problem Statement Template

Customer / User	IT Service Desk agents, support teams and employees who report IT incidents.
Problem	IT incidents can be difficult to manage efficiently because incident handling may involve multiple support teams, manual assignment, investigation, escalation and resolution activities.
Current Challenge	Manual classification and assignment; delayed escalation; difficulty accessing relevant knowledge; tracking related changes and child incidents; continuous SLA and resolution monitoring.
Impact	Delayed incident resolution, increased support effort and reduced visibility of the incident lifecycle.

Customer Problem Statement:

IT support teams need an efficient way to manage and track incidents throughout their lifecycle because manual classification, assignment, escalation, knowledge lookup and related-record tracking can make incident resolution slower and less consistent.
