

3. Empathy and Discover

Incident Lifecycle Automation using ServiceNow

Empathy Map Canvas – Example: IT Service Desk Agent

SAYS	THINKS
• I need to resolve incidents quickly. • I need the relevant knowledge article. • I need to track the incident status.	• Which support team should handle this incident? • Has this issue occurred before? • Will the incident meet its SLA?
DOES	FEELS
• Creates and classifies incidents • Assigns incidents to support teams • Searches knowledge articles • Updates work notes and resolution details	• Pressure to resolve incidents quickly • Concern about SLA delays • Frustration when information is difficult to find • Need for better visibility and coordination

Pains

- Manual incident classification and assignment
- Difficulty finding relevant knowledge
- Delayed escalation to Level 2 teams
- Tracking related changes and child incidents
- Monitoring SLA compliance

Gains

- Faster incident assignment
- Relevant knowledge available during resolution
- Better coordination between support teams
- Automatic tracking of related records
- Improved incident lifecycle visibility

Key Insight

IT support agents need a centralized and automated incident management process that helps them classify, assign, investigate, resolve and track incidents efficiently.
