

USER ACCEPTANCE TESTING

Project: ServiceNow Incident Lifecycle Automation

User Acceptance Testing (UAT) confirms that the completed Incident Lifecycle Automation project supports the expected Service Desk and support-team workflow. The scenarios below are based on the implemented incident lifecycle and final validation activities.

1. UAT Objectives

- Confirm that users can create and classify incidents correctly.
- Confirm that support teams can access knowledge and investigate incidents.
- Confirm that incidents can be reassigned and escalated to Level 2 support.
- Confirm that emergency changes and child incidents can be associated with incidents.
- Confirm that probable cause and resolution information can be documented.
- Confirm that resolved incidents can be converted into reusable Knowledge Articles.
- Confirm that SLA and related records can be reviewed before completion.

2. UAT Participants / Roles

- Service Desk Agent – creates, classifies, and assigns incidents.
- Level 2 Support Technician – investigates escalated incidents and performs resolution activities.
- Service/IT Manager – reviews incident progress, SLA information, and related records.

3. Acceptance Criteria

- The incident can be created with the required details.
- Category, subcategory, urgency, service, service offering, and configuration item can be maintained.
- Relevant Knowledge Articles can be accessed and attached to the incident.
- The incident can be reassigned from Service Desk to the Network support group.
- The Level 2 technician can review the incident, knowledge information, and SLA details.
- A change request and child incident can be linked to the incident where required.
- Probable cause, resolution code, and resolution notes can be recorded.
- The incident can be resolved successfully.
- A Knowledge Article can be created from the resolved incident.
- The final incident and related records can be verified.

4. UAT Test Cases

Test Case	User Acceptance Scenario	Expected Result
UAT-01	Create a VPN incident	Incident is created with the required caller and issue details.

Test Case	User Acceptance Scenario	Expected Result
UAT-02	Classify incident	Network/VPN classification and urgency are recorded correctly
UAT-03	Use Agent Assist	Relevant Knowledge Article is found and attached.
UAT-04	Reassign incident	Incident is moved to the appropriate support group.
UAT-05	Level 2 investigation	Technician can review incident, knowledge and SLA information
UAT-06	Emergency change	Required change activity is linked to the incident.
UAT-07	Child incident	Related issue is represented by a child incident.
UAT-08	Resolve incident	Cause and resolution details are recorded and incident is resolved
UAT-09	Create knowledge	Knowledge Article is created and appears in related records.
UAT-10	Final validation	Incident lifecycle and related records are verified successfully.

5. UAT Sign-Off

Item	Status
Business/User Acceptance	Accepted after successful execution of UAT scenarios
Incident Lifecycle Validation	Completed
Related Records Validation	Completed
SLA Validation	Completed
Final Acceptance	Ready for submission
